Morals: 1. Regular LDPCs (**not** capacity-approaching LDPCs) are order optimal!

Capacity-approaching LDPCs or regular LDPCs?

- Morals: 1. Regular LDPCs (**not** capacity-approaching LDPCs) are order optimal!
2. need new joint code/decoder designs

How much *density* of links can you attain?

Traditional picture: Waterfall

How much *density* of links can you attain?

Traditional picture: Waterfall

Density picture
[Grover, Woyach, Palaiyanur, Sahai '10]

“Wire model” of power consumption

$$P \propto \frac{1}{2} \text{Capacitance} \times V^2 \times t$$

“Wire model” of power consumption

$$P \propto \frac{1}{2} \text{Capacitance} \times V^2 \times t$$

“Wire model” of power consumption

$$P \propto \frac{1}{2} \text{Capacitance} \times V^2 \times t$$

Capacitance \propto Wire length

“Wire model” of power consumption

$$P \propto \frac{1}{2} \text{Capacitance} \times V^2 \times t$$

Capacitance \propto Wire length

Thus, $P \propto t \times$ Wire length

Ongoing work

- Multiuser setups:
 - broadcast [Grover, Sahai ISIT '09]
 - collection of point-to-point links [Grover, Woyach, Sahai JSAC '11]
- Accounting for receiver power beyond just the decoding power
 - ADC, equalizer, etc. Understanding various tradeoffs. [ongoing with Nikolic, Park]

Reducing power consumption: Option 2: “black-box” abstractions for processing power

The Tx and Rx consume a fixed amount of power when “on”

[Cui, Goldsmith Bahai]

[Massaad, Medard, Zheng]

[Prabhakaran]

Reducing power consumption: Option 2: “black-box” abstractions for processing power

The Tx and Rx consume a fixed amount of power when “on”

[Cui, Goldsmith Bahai]

[Massaad, Medard, Zheng]

[Prabhakaran]

upshot: bursty transmissions (“go to sleep”)
